68.000	71.497	71.176	74.710	56.086
69.000	71.764	71.189	74.213	55.478
70.000	71.713	71.222	74.332	55.393
71.000	71.476	71.278	74.340	55.226
72.000	71.428	71.352	74.646	55.735

- This table shows how prediction error changes from the first forecast step to the last forecast step.
- It is especially useful for explaining whether a model degrades smoothly or sharply as it predicts further into the future.
- Lower is better. This is a percentage-style error that is easier to compare across scales.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
