WEATHER: sMAPE at each forecast step
Lookback = 24 steps, Forecast horizon = 12 steps

Forecast step	CNN	LSTM	dCeNN+ELM	dCeNN+ELM+ASP
1.000	58.814	60.251	60.171	30.166
2.000	60.958	61.462	62.598	34.192
3.000	62.456	62.571	64.055	36.939
4.000	63.542	63.370	65.012	38.613
5.000	64.205	64.038	65.702	39.578
6.000	65.035	64.691	66.376	40.684
7.000	65.612	65.264	67.011	41.635
8.000	66.125	65.746	67.436	42.258
9.000	66.497	66.211	67.909	42.849
10.000	66.690	66.577	68.357	43.265
11.000	66.879	66.985	68.580	43.673
12.000	67.128	67.433	68.868	44.273

- This table shows how prediction error changes from the first forecast step to the last forecast step.
- It is especially useful for explaining whether a model degrades smoothly or sharply as it predicts further into the future.
- Lower is better. This is a percentage-style error that is easier to compare across scales.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
