70.000	41.742	42.617	50.913	44.758
71.000	42.190	42.852	45.708	43.137
72.000	42.129	43.029	50.134	43.006

• This table shows how prediction error changes from the first forecast step to the last forecast step.
• It is especially useful for explaining whether a model degrades smoothly or sharply as it predicts further into the future.
• Lower is better. Large mistakes are penalized more strongly than in MAE.
• Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
