

WEATHER: RMSE across forecast horizons
Fixed lookback = 168 steps

Forecast horizon	CNN	LSTM	dCeNN+ELM	dCeNN+ELM+ASP
12.000	33.800	34.553	75.339	67.287
24.000	36.485	38.199	43.531	42.440
72.000	39.756	41.390	62.072	53.116

- This table keeps the input lookback fixed at 168 steps and shows how model error changes as the forecast horizon becomes longer.
- Lower is better. Large mistakes are penalized more strongly than in MAE.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
