

WEATHER: R2 across forecast horizons
Fixed lookback = 72 steps

Forecast horizon	CNN	LSTM	dCeNN+ELM	dCeNN+ELM+ASP
12.000	0.989	0.989	0.986	0.987
24.000	0.987	0.986	0.987	0.988
72.000	0.985	0.983	0.985	0.986

- This table keeps the input lookback fixed at 72 steps and shows how model error changes as the forecast horizon becomes longer.
- Higher is better. Values closer to 1 mean the predictions follow the true pattern more closely.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
