

**WEATHER: MAE across lookback settings**  
**Fixed forecast horizon = 12 steps**

| Lookback | CNN    | LSTM  | dCeNN+ELM | dCeNN+ELM+ASP |
|----------|--------|-------|-----------|---------------|
| 24.000   | 9.994  | 9.489 | 11.177    | 9.392         |
| 72.000   | 10.111 | 9.721 | 12.339    | 10.742        |
| 168.000  | 10.182 | 9.834 | 14.550    | 12.917        |

- This table keeps the forecast horizon fixed at 12 steps and shows how model error changes when the lookback window changes.
- Lower is better. This is the average absolute difference between prediction and truth.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
