

**WEATHER: R2 across lookback settings**  
**Fixed forecast horizon = 12 steps**

| Lookback | CNN   | LSTM  | dCeNN+ELM | dCeNN+ELM+ASP |
|----------|-------|-------|-----------|---------------|
| 24.000   | 0.989 | 0.989 | 0.988     | 0.989         |
| 72.000   | 0.989 | 0.989 | 0.986     | 0.987         |
| 168.000  | 0.989 | 0.989 | 0.946     | 0.957         |

- This table keeps the forecast horizon fixed at 12 steps and shows how model error changes when the lookback window changes.
- Higher is better. Values closer to 1 mean the predictions follow the true pattern more closely.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
