

WEATHER: MAE across lookback settings
Fixed forecast horizon = 24 steps

Lookback	CNN	LSTM	dCeNN+ELM	dCeNN+ELM+ASP
24.000	11.596	10.390	12.148	10.287
72.000	11.489	11.088	11.739	10.138
168.000	11.515	11.569	14.939	13.281

- This table keeps the forecast horizon fixed at 24 steps and shows how model error changes when the lookback window changes.
- Lower is better. This is the average absolute difference between prediction and truth.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
