

WEATHER: MAE across lookback settings
Fixed forecast horizon = 72 steps

Lookback	CNN	LSTM	dCeNN+ELM	dCeNN+ELM+ASP
24.000	12.771	12.114	13.896	11.895
72.000	12.963	13.766	12.977	11.436
168.000	13.102	13.142	15.458	13.457

- This table keeps the forecast horizon fixed at 72 steps and shows how model error changes when the lookback window changes.
- Lower is better. This is the average absolute difference between prediction and truth.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
