

Overall model comparison for ENERGY
Lookback = 168 steps, Forecast horizon = 12 steps

Model	RMSE	MAE	sMAPE (%)	R ²	Bias	NRMSE
CNN	351.086	211.100	61.485	0.988	-17.094	0.132
LSTM	366.964	224.037	60.913	0.987	-26.165	0.138
dCeNN+ELM	670.042	453.233	80.833	0.957	-137.490	0.253
dCeNN+ELM+ASP	657.047	432.490	58.980	0.958	-137.557	0.248

• This table compares all models for one fixed experimental setting.
• For RMSE, MAE, sMAPE, and NRMSE, smaller values are better. For R², larger values are better. For Bias, values closer to zero are better.
