

Overall model comparison for ENERGY
Lookback = 168 steps, Forecast horizon = 24 steps

Model	RMSE	MAE	sMAPE (%)	R ²	Bias	NRMSE
CNN	433.227	261.933	65.628	0.982	-26.593	0.163
LSTM	451.310	280.394	65.828	0.980	-36.222	0.170
dCeNN+ELM	672.872	448.891	81.668	0.956	-173.862	0.254
dCeNN+ELM+ASP	664.277	431.657	59.877	0.958	-179.234	0.251

• This table compares all models for one fixed experimental setting.
• For RMSE, MAE, sMAPE, and NRMSE, smaller values are better. For R², larger values are better. For Bias, values closer to zero are better.
