

Performance relative to the persistence baseline for WEATHER  
Lookback = 72 steps, Forecast horizon = 12 steps

| Model         | RMSE / persistence | MAE / persistence | RMSE gain | BASE_RMSE | BASE_MAE |

- These ratios compare each model with the persistence baseline. Values below 1.0 for RMSE/MAE ratios mean the model beats persistence.
- Persistence is a simple forecast that repeats the last observed value forward.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
