

Performance relative to the persistence baseline for WEATHER

Lookback = 72 steps, Forecast horizon = 72 steps

Model	RMSE / persistence	MAE / persistence	RMSE gain	BASE_RMSE	BASE_MAE
CNN	0.313	0.326	0.687	126.715	39.730
LSTM	0.336	0.346	0.664	126.715	39.730
dCeNN+ELM	0.309	0.325	0.691	127.159	39.911
dCeNN+ELM+ASP	0.304	0.287	0.696	127.159	39.911

- These ratios compare each model with the persistence baseline. Values below 1.0 for RMSE/MAE ratios mean the model beats persistence.
- Persistence is a simple forecast that repeats the last observed value forward.
- Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
