69.000	13.806	13.404	15.678	13.588
70.000	13.968	13.453	15.794	13.557
71.000	14.134	13.514	15.678	13.484
72.000	14.131	13.573	15.599	13.414

• This table shows how prediction error changes from the first forecast step to the last forecast step.
• It is especially useful for explaining whether a model degrades smoothly or sharply as it predicts further into the future.
• Lower is better. This is the average absolute difference between prediction and truth.
• Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
