70.000	13.579	13.050	15.151	13.165
71.000	13.405	13.098	14.995	13.113
72.000	13.504	13.175	14.928	13.057

• This table shows how prediction error changes from the first forecast step to the last forecast step.
• It is especially useful for explaining whether a model degrades smoothly or sharply as it predicts further into the future.
• Lower is better. This is the average absolute difference between prediction and truth.
• Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
