70.000	13.918	14.032	13.944	12.398
71.000	13.820	14.115	13.876	12.376
72.000	13.992	14.271	13.895	12.436

• This table shows how prediction error changes from the first forecast step to the last forecast step.
• It is especially useful for explaining whether a model degrades smoothly or sharply as it predicts further into the future.
• Lower is better. This is the average absolute difference between prediction and truth.
• Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
