71.000	41.489	44.083	40.835	40.199
72.000	41.554	44.327	40.848	40.238

• This table shows how prediction error changes from the first forecast step to the last forecast step.
• It is especially useful for explaining whether a model degrades smoothly or sharply as it predicts further into the future.
• Lower is better. Large mistakes are penalized more strongly than in MAE.
• Weather combines multiple physical variables. Aggregate RMSE or MAE should therefore be read mainly as a model-comparison tool, not as a single physical-unit error.
