

**Per-target model comparison for Wind Mw**  
**Task = ENERGY, Lookback = 24 steps, Forecast horizon = 12 steps**

| Model         | RMSE    | MAE     | sMAPE (%) | R²    | Bias     | NRMSE |
|---------------|---------|---------|-----------|-------|----------|-------|
| CNN           | 503.902 | 357.256 | 65.653    | 0.582 | -34.887  | 0.615 |
| LSTM          | 514.098 | 368.727 | 65.972    | 0.565 | -41.072  | 0.628 |
| dCeNN+ELM     | 654.448 | 484.010 | 87.263    | 0.294 | -206.006 | 0.801 |
| dCeNN+ELM+ASP | 646.331 | 471.777 | 87.263    | 0.312 | -193.773 | 0.791 |

- This is the clearest table for explaining performance on the Wind Mw variable.
- Use it when discussing which variable is easy or difficult to forecast.
