

Per-target model comparison for Precipitation
Task = WEATHER, Lookback = 168 steps, Forecast horizon = 72 steps

Model	RMSE	MAE	sMAPE (%)	R ²	Bias	NRMSE
CNN	0.490	0.195	174.288	0.014	-0.045	3.352
LSTM	0.493	0.193	175.261	0.003	-0.049	3.371
dCeNN+ELM	0.539	0.275	175.762	-0.183	0.030	3.680
dCeNN+ELM+ASP	0.525	0.257	140.412	-0.123	0.034	3.585

- This is the clearest table for explaining performance on the Precipitation variable.
- Use it when discussing which variable is easy or difficult to forecast.
