

Per-target model comparison for Precipitation
Task = WEATHER, Lookback = 24 steps, Forecast horizon = 72 steps

Model	RMSE	MAE	sMAPE (%)	R²	Bias	NRMSE
CNN	0.490	0.189	175.131	0.014	-0.056	3.352
LSTM	0.490	0.195	174.066	0.012	-0.043	3.355
dCeNN+ELM	0.510	0.271	176.788	-0.067	0.024	3.481
dCeNN+ELM+ASP	0.506	0.246	121.681	-0.049	0.033	3.452

- This is the clearest table for explaining performance on the Precipitation variable.
- Use it when discussing which variable is easy or difficult to forecast.
